Trigger: DropOffTrigger

Object: Drop_Off_point__c

Event: before insert

Purpose:

This trigger assigns the value from the 'distance_calculation__c' field to the 'Distance__c' field during the insert operation.

This allows the Distance__c field to be used in Salesforce sharing rules or other logic.

Code:

```
trigger DropOffTrigger on Drop_Off_point__c (before insert) {
    for (Drop_Off_point__c drop : Trigger.new) {
        // Optional: Check if the calculation field is not null
        if (drop.distance_calculation__c != null) {
            drop.Distance__c = drop.distance_calculation__c;
        } else {
            // Optional fallback: set to zero or leave blank as needed
            drop.Distance__c = 0;
        }
    }
}
```
